Course Overview

teaches you how to implement & operate enterprise-level Aruba campus switching solutions. Hand-on labs give you experience with ArubaOS-Switches, including securing access, redundancy technologies

About This Course

teaches you how to implement & operate enterprise-level Aruba campus switching solutions. Hand-on labs give you experience with ArubaOS-Switches, including securing access, redundancy technologies

Who Should Attend

Typical candidates for this course are IT Professionals who will deploy and manage networks based on HPE's ArubaOS-Switches.

Learning Outcomes

Upon successful completion of this course, participants will be able to:

Implement spanning tree protocol and loop protections

Ensure redundancy for a network's default gateway by configuring VRRP on Aruba switches

Implement and manage an VSF fabric

Deploy ArubaOS switches in single-area and multi-area OSPF systems

Use Internet Group Management Protocol (IGMP) to optimize forwarding of multicasts within VLANs

Implement PIM-DM to route multicast traffic

Establish and monitor BGP sessions between your routers and ISP routers

Define ACLs and identify the criteria by which ACLs select traffic

Configure ACLs on ArubaOS switches to select given traffic

Implement 802.1X on ArubaOS switch ports

Configure captive portal authentication on ArubaOS switches to integrate them with an Aruba ClearPass solution

Configure tunneled-node on ArubaOS switches

Configure ArubaOS switches to select traffic, apply the appropriate QoS marking, and place the traffic in the proper priority queues

Implement DHCP snooping and ARP protection to defend networks against DHCP exploits, ARP snooping, and ARP poisoning attacks

Implement the proper port security measures for various use cases

Implement connection rate filtering to provide a first layer of protection against viruses and worms
